Weyerhaeuser products are manufactured to specific tolerances under exacting production standards. Our customers expect high-quality structural wood products that are dimensionally stable and easy to install. However, mishandling Weyerhaeuser products or leaving them unprotected in wet conditions can compromise their structural capabilities, impact product dimensions, and cause installation problems. In addition, like any wood-based product, engineered lumber, sheathing, and panels are at risk for fungal decay if exposed to repeated wetting or high-moisture environments.

To help prevent these kinds of problems, avoid exposing Weyerhaeuser products to excessive moisture conditions or careless handling. The following guidelines explain how you can protect your Weyerhaeuser products and deliver the quality and performance that your customers expect.

Transporting and Handling Weyerhaeuser Trus Joist® Products
Weyerhaeuser recommends that, whenever possible, Trus Joist® engineered lumber products be covered with a weatherproof tarp during transport.

Trus Joist® products are shipped in wrapped bundles and should remain wrapped during transportation and storage. The ends of individual pieces are protected by a high-quality sealer that inhibits end swelling by forming a barrier against moisture.

Handle Trus Joist® TimberStrand® LSL, Parallam® PSL, and Microllam® LVL in a flat orientation. Handle Trus Joist® TJI® joists in a vertical orientation. Protect the edges and ends from damage, keep the load level, and lift the stack from the center.

Storing Weyerhaeuser Products
While in inventory and on the job site, Weyerhaeuser products should be stored under a roof, tarp, or wrap; in a location with minimum moisture exposure. If they are stored outside, protect products from the elements on all sides. Promptly repair any tears or punctures in the protective wrap with product wrap tape. Ensure that no water is trapped within the wrap before taping it.

When covering Weyerhaeuser products with plastic, allow for proper ventilation. Covering products too tightly can create a warm, humid environment that may support the growth of mold or mildew.

Transporting and Handling Weyerhaeuser Edge™, Edge Gold™ and Other OSB Products
Weyerhaeuser oriented strand board (OSB) sheathing and Edge™ and Edge Gold™ floor panels that are transported in open flatbed trucks should be covered with a weatherproof tarp.

All edges on Edge™ and Edge Gold™ floor panels are sealed for moisture and weather resistance. However, if panel edges do become swollen, they can be touch-sanded without structural loss.

Handle OSB sheathing and panels in a flat orientation. Protect the edges and ends from damage, keep the load level, and lift the stack from the center. When moving OSB with a forklift, stack on a bunk or a pallet and insert the forklift tines into the support, not into the panel or sheathing stack.

Proper transportation, handling, and storage can help prevent exposure-related problems that affect the performance of engineered lumber and panels.
Supporting Trus Joist® engineered lumber products: Use 8” or 12” high support blocks and 2x4 stickers at approximately 10’ on-center. Align stickers to prevent storage camber. See details below. Rewrap material only when dry, and rewrap only with dry product wrap. Do not turn product wrap inside out because it has been designed for maximum protection and durability as originally packaged.

Supporting Weyerhaeuser OSB products: Use a platform made from cull panels and scrap lumber supported by stickers that extend across the width of the stack. Keep panels at least 4” from the ground. Put one sticker in the center of the load and the others approximately 12” from each end. See detail below.

When covering OSB, drape plastic over the ends of the stack and secure it. Then drape plastic over the top and sides of the stack and stake it to the ground, pulling ends away from the product to allow air circulation along the sides of the stack. See detail below.

Ordering Weyerhaeuser Product Wrap Tape or Product Wrap
To order product wrap tape, please contact InterWrap Corporation at 1-800-567-9727. To order additional product wrap, please contact Weyerhaeuser customer service.

Storing Trus Joist® Products

Protect products from sun and water

CAUTION: Wrap is slippery when wet or icy

Use 2x4 stickers at 10’ on-center

Use 8” or 12” high support blocks at 10’ on-center to keep products out of mud and water

Store and handle Parallam®, Microllam®, LVL, and TimberStrand® LSL in a flat orientation (wrapped)

Store and handle TJI® joists in a vertical orientation (wrapped)

Storing Weyerhaeuser OSB Products

Plastic cover

Platform made from cull panel

4x4 sticker in center and 12” from each end

Drape plastic over top and sides. Allow air circulation.

Nail plastic to top

Drape plastic over each end and hold down with 2x4

Store and handle Weyerhaeuser OSB products in a flat orientation

Weyerhaeuser product wrap is recyclable.
