

SPECIFY EVERY MEMBER OF THE STRUCTURAL FRAME

STRUCTURAL FRAME DESIGN SOFTWARE THAT SOLVES YOUR PROBLEMS

WEYERHAEUSER JAVELIN[®] STRUCTURAL FRAME DESIGN SOFTWARE

Javelin[®] software by Weyerhaeuser is a solution that allows you to build a complete 3D model of the entire structural frame with the ability to analyze members using an integrated design engine. From a project's concept, to an on-screen virtual job site and all the way to the actual job site—Javelin software does it all.

Weyerhaeuser's mission is to provide best-in-class software tools for EWP specification, material takeoff, design, operations and installation. Our Modus Software Suite contains multiple titles that deliver reliable performance—plus each title shares model information between them thus preventing the unnecessary effort of redefining the building model multiple times during the construction cycle.

WEYERHAEUSER JAVELIN[®] SOFTWARE SOLVES PROBLEMS

Use Javelin software in a way that solves problems for you and your customers. Javelin allows you to provide anything from quick material take-off to specific details for every member in the structure and everything in between. Draw as much or as little as you need to make Javelin software work for you.

PROBLEM: INSTALLATION ERRORS

Using Javelin's enhanced layout capabilities, including the color coding of members and unique labeling, you won't have to worry about having the wrong product in the wrong place. You'll also be able to locate the pieces you need faster than ever before.

PROBLEM: MATERIAL DELIVERY MISTAKES

Javelin gives you precise material list options so that your list matches what is shipped. Accurate member labels mean that materials don't get misappropriated.

PROBLEM: COLLABORATION FAILURE

Javelin excels in visually displaying the 3D model. Share Javelin's model for collaborating with the mechanical designer, EOR, AOR, component manufacturer, builder or dealer. Effective collaboration identifies problems before materials hit the jobsite.

Gain code approvals earlier with the Javelin design layout. The model allows you to capture calculations for necessary approval down the line.

Knowing your total system design will allow you to better understand your structure. This understanding is key for finding and remedying any potential design problems. Even better, Javelin will assist you with finding and creating alternative design solutions.

WHAT CAN DEALERS DO BETTER WITH JAVELIN DESIGN SOFTWARE?

- Improve accuracy and efficiency
- Enjoy advanced 3D modeling capabilities
- Create and share customized design templates
- Communicate layout details clearly and quickly
- Use a single point of entry for the entire layout
- Seamlessly integrate layout changes
- Verify design accuracy at every step
- Account for plumbing runs, stub-ups, and ductwork
- View and change variables on the fly
