

Sustainability and EWP Sourcing

For more than a century, we have been growing trees and manufacturing wood products that are essential to everyday life. We understand the decisions we make each day can impact the health of our forests and the strength of our communities for decades to come. That's why at Weyerhaeuser we take the long-term view and integrate sustainability into all aspects of our business.

Wood is the ultimate green building material. It can be produced on an endlessly renewable cycle that protects the environment and sustains rural communities. Its production consumes less energy, emits fewer greenhouse gases (GHGs), releases fewer pollutants, stores more carbon and generates less water pollution compared with other building materials such as steel and concrete. It's also safe, durable and beautiful. You can find more information about our sustainability commitments and performance at www.wy.com/sustainability

Our wood products can help satisfy important sustainable building objectives through major green building standards, such as LEED®, Green Globes® and the National Green Building Standard™. To demonstrate how our products align with the many different green building program requirements, we publish a summary report, [VAR-1008](#), that outlines how our wood products fit into numerous green building programs.

RAW MATERIAL SOURCING

Sourcing Breakdown: Refer to the “Wood and Fiber Supply Chain Sustainability” section within our [ESG Data table](#) to see the breakdown of the raw material sources that make up our products.

Sustainable Forestry Certification: All our mills are certified to the SFI® Fiber Sourcing or SFI Certified Sourcing standards. Select mills are certified to the SFI Chain of Custody standard. Our certificates can be found at <https://www.weyerhaeuser.com/sustainability/environmental-stewardship/#certification>

- Products certified to the SFI Chain of Custody standard earn points in both LEED v5 and v4. [Learn how to count SFI-certified products for LEED points.](#)
- Only our TimberStrand® mill is certified to Chain of Custody standards. To get an SFI or PEFC chain of custody claim associated with product from these mills, please contact your sales representative.
- To learn more about certification in our supply chain, see our [How We Do It: Forest Management & Wood Procurement Certification](#).

PRODUCT DISCLOSURE

Environmental Product Declarations: Learn about the environmental impacts, including embodied carbon values, of our wood products from [our industry-wide EPDs](#).

Material ingredients: Our safety data sheets provide details about any hazardous chemicals in our products. We also have a dedicated resource to answer questions about formaldehyde.

- [Safety Data Sheets](#)
- [Questions and Answers about Wood Adhesives and Formaldehyde Emissions](#)

Product Certifications: Many of our wood product and software solutions are [Green-Certified Products under the National Green Building Standard](#).

PRODUCT PRODUCTION

We manufacture wood products at facilities across North America. Locations can be found on the “Contact Us/Locations” [page of our website](#) and filtered by product type.

Related to engineered wood products, we produce:

- Western-region Parallam® PSL in Vancouver, Canada
- TimberStrand® LSL in Kenora, Canada, and Monticello, Arkansas (starting in 2027)
- Western region TJI® joists and Microllam® LVL in Eugene, Oregon
- Eastern region TJI® joists and Microllam® LVL in Castleberry, Alabama, and Natchitoches, Louisiana
